

the first to offer a Mobile Fuel Lab in the industry

Complete Fuel Quality Testing

"We bring our mobile fuel lab to you providing Rapid Results within an hour using the same ASTM testing methods as off-site laboratories. We guarantee this will reduce your overall maintenance and fuel cost maximizing your up-time which ensures boat owners a Peace of Mind." - Jonathan Drew, VP, Drew Fuel Services

Cost Savings: Cost Savings: Ethanol Blends absorb 40-50 times more water compared to recreational fuel. Only 2-3 teaspoons of water will cause phase separation in E-10. Removing ethanol and water from tank bottoms will cause octane to drop 2-3 times. As water builds in the tank it causes more damage every time you fill-up. We find that most water finding pastes do not distinguish between water and phase separation. **Our customers report a large savings in overall operating expenses when testing fuel regularly..**

Peace of Mind: Tests are conducted to ASTM standards and we currently utilize the same instruments used by numerous state inspectors. All tests are conducted on premises and a detailed report is provided on Fuel Quality, Ratings and Actions Steps. **We know fuel; and rest assured when you leave dock the your fuel will be fit for its purpose.**

Lower Maintenance Costs: Over 85% of engine failures are contributed to fuel. Our customers have reported a large cost savings in filter replacement, blown injectors and in some cases **eliminated catastrophic engine failures.**

Rapid Results: Most ASTM testing results are achieved within 1-hour once sample is pulled. Along with a detailed report, we provide actions steps if necessary.

Gasoline /Diesel Tests Include:

- Ethanol Content
- Octane
- Water & Sediment
- Appearance
- Flash Point
- Microbial Growth
- Cetane Index
- Many Other Tests Available

**\$50.00 additional fee for RUSH Service*
